As the FTC Rules requires, we do not guarantee or imply that by using this tool, you will get rich or make money at all.

Software and associated files is distributed as is without any warranty of any kind, either express or implied.

Software and associated files is not freeware or shareware.

Selling or distribution of the code (in whole or in part) of this program without prior written consent is expressly forbidden.

Plugin Overview

The plugin helps you to quickly protect your download pages from being Illegally shared + it also protects them from being indexed by search engines like Google, Yahoo, Bing and others.

It's a quick protection that you can easily add to these pages and it works with both WordPress Pages and Posts.

Installing The Plugin.

Installing the plugin is like installing any other WP plugin.

Step 1: Go to the "Plugins" section and click.

Step 2: Click "Add New" and Upload the included zip file.

Step 3: Activate it.

----- Intentionally Left in Blank -----

Using The Plugin.

Using the plugin is really easy.

First, create a wordpress page / post (or edit an existing one).

At the end of the document, you'll see a "This banner will be seen by those visitors who spend 30 seconds or more on this post."

Step 2: Enable The Protection For Your Page / Post.

A screenshot of the 'Quick Download Page Protector' settings page. A green arrow points to the 'Enable' dropdown menu, which is set to 'Yes'. A red arrow points to the 'Redirect Unauthorized Users To:' text field, which contains 'http://www'. Another red arrow points to the 'Security Key' text field, which contains a long alphanumeric string. The page includes instructions and a warning about the security key.

Quick Download Page Protector

Enable: Yes

Enable Quick Download Page Protector. This will also hide the page from the search engines.

Redirect Unauthorized Users To: http://www

Non authorized visitors will be redirected to this page.

Tip: You could use a page with instructions on how to get access again (example: in W+ / JVZoo, click "My Purchases" and then get access to the product etc) so you take care of genuine buyers who may have lost access to your page because they have deleted their cookies etc.

Security Key: ?epk=o1PG3kCRbnfWTmyUK1ScSA4OQKscLJUKdfLGlyReBkwqeNDeLH

The System Will Generate.

Instructions: To protect this page, add this secret key at the end of your page (permalink). Then use this url as your thank you with PayPal, JVZoo, WarriorPlus or any other platform.

After a customer makes a purchase, this secret key will be removed from the url (the user will not see it) and he will be cookie'd to get access to this page in the future.

Important: Avoid changing your key. If you do this, your past customers will not be able to access your page.

Step 4: Publish your Page/Post and add the security Key at the end it (at the end of the url of your page of post).

For example, if your download page is...

<http://www.yoursite.com/mydownloadpage>

And your secret key is ...

?epk=TJeAOA04PKMmCx1wqPH9YXimsLKICAxIFhEOkbxeO8bbQu

...

Your final url will be....

<http://www.yoursite.com/mydownloadpage?epk=TJeAOA04PKMmCx1wqPH9YXimsLKICAxIFhEOkbxeO8bbQu>

That full url, is the url that you have to use as your "Thank You" or "Download Page" in PayPal, JVZoo, WarriorPlus, ClickBank or other Platforms.

Now, When Someone Purchases Your Product...

When someone purchases your product, the system will validate the key that's passed by your payment processor (and which will be automatically removed from the url - the user won't see that key in the url bar of his browser).

If the key is valid, the customer will be cookie'd and will be able to access to that post/page (now and in the future).

Other users won't be able to access.

Comment: In the Pro version (which you already have), you can also create a temp security key for manual distributions (in case that you need to manually send an access link to someone).

Security Key (For Automatic Distributions):	<div>?epk=07k5fjs90XEZDwuGVYH4WLlguJCBjdHgPFEg6aXNsvfulNLp9</div> <p><i>Instructions: To protect this page, add this secret key at the end of your page (permalink). Then use this url as your thank you with PayPal, JVZoo, WarriorPlus or any other platform.</i></p> <p><i>After a customer makes a purchase, this secret key will be removed from the url (the user will not see it) and he will be cooked to get access to this page in the future.</i></p> <p><i>Important: Avoid changing your key. If you do this, your past customers will not be able to access your page.</i></p>
Temp Security Key (For Manual Distributions):	<div>?epk=2ole8XGFGW3An9lf6woLvCNXJDx5LbzQohfivudQU63SxlpkD0</div> <p><i>Instructions: A temp security key can be used to manually send a the access link to someone in particular instead of sharing the previous url (which will be used as "Thank you page" in your processor). As you will be manually sharing this url with the key, the page can be also shared with other people. To prevent illegal sharing we recommend you to change this secret key in particular within 12 or 24 hs of sharing it. After changing this key, the access page will not be available for those who manually got access before.</i></p>

Security Key #2 For Manual Distributions.

If you use it, it's recommended to mention that the link will be available for 24 hs (or any other period of your choice).

Then (after that period has passed), it's recommended to change that private key for another one.

Final Comments

The system works with cookies, which means that (if the user deletes the cookies, he won't be able to access to his download page).

This is why, it's a good idea to be polite with the message that you use in the redirect url that you use for non-authorized users.

It's a good idea to use that page to:

- Enter your email for support (or your support desk).
- If you're using WarriorPlus / JVZoo, you can tell your visitors that they can access again to the download page by going to their "My Purchases" link.

That's all!
